STUDENT RUN GROUP EXERCISES

GREEN NOVICE RUN GROUP

Student passing exercises will focus on getting students familiar with passing. Students will be paired for this exercise. Each pair will run together and alternate giving and receiving passing signals at **each passing zone**. All passing signals will be given as **early as possible** and all passes will be **completed on the straight**. Early and distinct signals will be emphasized.

WHITE INTERMEDIATE RUN GROUP

Student passing exercises will focus on giving and taking late passing signals into **selected** corners on the track. A late passing signal is one that will not allow the passing car to safely come back on-line before entering the corner. Students will be paired for this exercise. The lead car gives a late passing signal and then accommodates a late pass by slowing appropriately **while maintaining his/her normal line into the corner**. The passing car **anticipates** the signal by maintaining momentum and prepares to pull off-line and pass off-line right into the apex of the corner. At that point the two cars resume the “normal line” until the next designated late pass corner.

BLACK ADVANCED RUN GROUP

During the course of the two day event, NRPCA Senior Instructors will be conducting “check-out” rides for all Black (Advanced) run group students.

Notes to Students and Instructors

Please make every effort to stay together for this exercise.
Exercises are to be practiced at **reduced speed**.
Paired students and instructors should meet to plan a strategy for staying together and avoiding becoming part of a train.
